 **Extensions incluses** : Aucune, liste...

 **Requiert** : -

 **Support** : <http://code.zikula.org/news>

 **Changements** :

- The module is now **Gettext** based and has had a major language review (thanks Drak and David). This means the module can only be used in [Zikula](#) 1.2 and beyond.
- Database table renamed to prefix_news and permission scheme is now using News:: as Component. The upgrade script will take care of the renaming.
- There is a new **Draft** status for an article. In the administrators new form, AJAX is being used for saving the draft article on the fly. This will be worked on further for the next version(s).

- Articles contain a new **weight** field. This field can be used in sorting in the index page and the various blocks.
- First set of documentation available [here](#).
- The user-id that approves a Pending Review article is now being stored.
- A lot of layout and interface improvements in the various News areas (also thanks to Carsten)

- A mailz plugin is available
- Multihook needle is now available, using NEWS{article-id}.
- Ajax editing works again with scribite 4.1 and Xinha.
- You can switch on **E-mail notification** for a new Pending Review article.
- You can switch on the display of "More Articles in this category" for an article.
- **PDF display** of an article is available with the use of [TCPDF](#) open source [PHP](#) class. More information [here](#).
- When News is installed for the first time an introductory article is present.
- News (link Submit an article) is shown in Profile overview (thanks Ralf)
- Date selection with popup calendar ([date/time picker](#))
- Improvements to the upgrade script (thanks for testing guys !)
